ANAND KUMAR

JAVA SPRING BOOT BACKEND DEVELOPER

Noida, India | anandkoderma85810@gmail.com | github.com/anandkumar85810 | linkedin.com/in/anand-kumar | anandkumar85810.github.io

PROFESSIONAL SUMMARY

Results-oriented Software Developer specializing in **Java**, **Spring Boot**, and **RESTful API architecture** with proven full-stack and backend production experience. Skilled in designing normalized relational schemas in **MySQL**, optimizing data access with **Spring Data JPA / Hibernate**, implementing **Redis caching**, and containerizing backend services with **Docker**. Experienced in decoupled Controller-Service-Repository patterns, API testing via **Postman**, and Agile collaboration at Deytal Technologies Pvt. Ltd.

TECHNICAL SKILLS

Backend & Languages: Java (Core & Advanced, OOP, Collections, Streams), Spring Boot, Spring MVC, REST APIs, Hibernate/JPA, Spring Security & JWT, PHP, Laravel, SQL

Databases & Caching: MySQL, Redis (Caching & Session Store)

Tools & DevOps: Docker, Git, GitHub, Maven, Postman, CI/CD (Learning / In Progress)

Frontend & Web: HTML5, CSS3, JavaScript (ES6+), Bootstrap 5

Architectural Patterns: Controller-Service-Repository Pattern, DTO Pattern, Global Exception Handling, CRUD API Architecture, Relational Schema Normalization

PROFESSIONAL EXPERIENCE

Deytal Technologies Pvt. Ltd. — ***Full Stack Developer*** May 2024 – Present | Noida, India

- Develop and maintain scalable backend web applications and RESTful APIs, connecting frontend interfaces with database systems.
- Architect and optimize relational MySQL schemas, indexing query paths, table relationships, and data validation rules for reliable transaction handling.
- Implement backend business logic, CRUD endpoints, and secure data access layers adhering to MVC and service-oriented patterns.
- Actively build and explore Java Spring Boot microservice architectures, leveraging Spring Data JPA, Hibernate, Redis caching, and Docker.

Deytal Technologies Pvt. Ltd. — ***PHP Laravel Developer Intern*** Feb 2024 – May 2024 (3 Months) | Noida, India

- Contributed to web application development using PHP and Laravel, developing modular controllers, migrations, and database seeders.
- Implemented server-side and client-side input validation, error handling, and authentication workflows.
- Collaborated on application debugging, unit verification, and resolving performance bottlenecks in database queries.

TECHNICAL PROJECTS

HireHub — Job Portal & Recruitment Management System **Java, Spring Boot, REST APIs, Hibernate/JPA, MySQL, Maven, Postman**

- Engineered a comprehensive recruitment backend platform with role-based REST APIs for candidate job applications, recruiter postings, and hiring pipelines.
- Built clean layered architecture (Controller, Service, Repository, DTO) ensuring decoupled responsibilities, testability, and maintainability.
- Structured relational MySQL database models with JPA entity relationships, server-side validation using Hibernate Validator, and custom error response entities.

Student Management System — Academic Records REST API **Java, Spring Boot, MySQL, Hibernate/JPA, REST API, Postman**

- Developed an academic management RESTful web service for student demographics, course enrollments, and grading records.
- Implemented Spring Data JPA repositories with derived query methods, pagination, and transactional data integrity across multiple tables.
- Configured centralized application error handling via `@ControllerAdvice` and `@ExceptionHandler` for consistent JSON error structures.

Spring Boot E-Commerce System — Scalable Backend with Redis & Docker

Java, Spring Boot, MySQL, Redis, Docker, REST API, Hibernate/JPA

- Constructed backend services for e-commerce catalog management, shopping cart operations, inventory tracking, and order placement.
- Integrated a Redis caching layer for hot product catalog queries, significantly reducing database read latency.
- Containerized backend services and database instances using Docker for consistent local and deployment environments.

Shopora — Jewelry E-Commerce Web Application

PHP, Laravel, MySQL, Bootstrap 5, JavaScript

- Engineered a full-featured online jewelry e-commerce platform with product showcase, shopping cart, user authentication, and order workflows.
- Created an administrative dashboard for inventory tracking, order management, and customer records.

EDUCATION

Bachelor of Computer Applications (BCA)

Graduated: 2023

- Coursework: Data Structures & Algorithms, Object-Oriented Programming (Java), Database Management Systems (DBMS), Web Development.
